**PULMONARY REHAB**

WHAT IS PULMONARY REHAB?

Pulmonary rehabilitation is a program of education and exercise to increase awareness about your lungs and your disease.

WHO NEEDS PULMONARY REHAB?

Pulmonary rehabilitation is recommended for patients with lung disease who experience shortness of breath frequently and are not able to perform daily activities despite daily use of medication. Many patients in rehabilitation programs have a diagnosis of COPD, but these programs also help people with other types of chronic lung disease that limits breathing and activity.

WHAT ARE THE BENEFITS OF PULMONARY REHAB?

- You will learn to achieve exercise with less shortness of breath.
- The classes are often offered in a group setting so you get the chance to meet others with your condition, which provides an opportunity to give and receive peer support.
- You'll become stronger by increasing your level of fitness.
- Exercising your lungs and your muscles helps you be more active and have more stamina so you can do the things you enjoy with your loved ones.

Talk to your healthcare provider or pulmonologist to see if this is something that would benefit you.
